

# Joao Carlo Muñoz Choque

## Bachelor of Computer Science | Data & Platform Analyst

Email: [joao.munoz.c@gmail.com](mailto:joao.munoz.c@gmail.com) | Phone: +56 9 93906662 | Location: Santiago, Chile | Web: [joaomunoz.github.io](https://joaomunoz.github.io)

### Professional Summary

Computer Science professional with expertise in SQL Server, Power BI and IT monitoring tools (Zabbix, Nagios, Tivoli), with a background in web development using Django, HTML, CSS and JavaScript. Experienced in ETL automation with SSIS and Python — pipeline development, API integration and process scripting —, operational dashboards, local area network (LAN) support and VPN access, and incident management in critical financial sector infrastructure (banking, pension funds, compensation funds). A profile suited for roles where data quality, process automation and operational stability are a priority.

### Education

• **Bachelor of Computer Science**, Universidad de Santiago de Chile [2019]

### Languages

- **Spanish**: Native
- **English**: Advanced

### Technical Skills

**Databases**: Oracle, SQL Server and MySQL | **BI & ETL Processes**: Power BI, Pentaho and SSIS | **Monitoring**: Tivoli, Zabbix, Nagios and VZOR | **Incident Management**: Jira | **Programming Languages**: C/C++, Python and PHP | **Web & UI/UX**: HTML, CSS and JavaScript | **Framework**: Django | **Operating Systems**: Linux and Microsoft Windows | **Version Control**: Git and GitHub | **Methodologies**: SCRUM and XP | **Scraping / Anti-bot**: curl.cffi (TLS fingerprinting), BFF/GraphQL APIs | **Backend / APIs**: FastAPI, SQLAlchemy and Pydantic | **AI Agents / MCP**: Multi-agent orchestration and OpenCode | **Office Tools**:  $\text{\LaTeX}$ , Microsoft 365 (Power Automate, Excel) | **Networking**: Local area network (LAN) installation, VPN and TCP/IP basics

### Work Experience

#### IBM — Process Operator and Command Center

Aug 2023 – Jul 2024

- Monitored and oversaw networks, platforms and critical services with Nagios, Tivoli, Zabbix and VZOR under a multi-client model, managing operational continuity for large corporations such as **Itaú, Grupo Security, Ripley, AFP Habitat, SURA, Los Héroes, CMPC and AZA**.
- Maintained incident reports segmented by operational unit (BBDD, UNIX, WINTEL, WAS, Networking and SAP) with Jira tracking, managing internal and external escalations based on service criticality.
- Participated in the development of the *Command Center* dashboard in Power BI, integrated into Microsoft Teams with SharePoint as data source via Excel documents, for operational efficiency measurement and client escalation reporting.
- Built a Power Automate flow that extracted sub-reports from Outlook emails and automatically consolidated them into a single report based on output schedules.
- Executed nightly/batch processes and managed backups with EMC NetWorker and TSM in critical infrastructures.
- Managed user access and profiles, performed platform maintenance and ensured continuity of critical services in a 24/7 environment.

#### M y CH Inmobiliaria — Real Estate Management and Construction

Sep 2020 – Jan 2023

- Administrative management for a family-owned real estate and construction company: rent collection, coordination of basic utilities maintenance and construction support.

#### G-Talent — Programmer Analyst

Sep – Nov 2019

- Developed business management reports with SQL Server using Stored Procedures, structuring queries for extraction and transformation of operational data.
- Generated internal audit and management control reports using Oracle, delivering consolidated information for decision-making.
- Developed a complete ETL pipeline in SSIS with SQL Server for the billing report of VTR customers, automating the extraction, transformation and loading of billing data.

#### Medicien — Programmer Analyst

Jun – Aug 2019

- Designed and developed the PortalPaciente database in SQL Server for medical appointment registration, dentist schedule management and dental service control.
- Implemented ETL automation in Pentaho with API integration and security tokens for data extraction from the dental service to the database.
- Managed data interoperability between Oracle Horizon and SQL Server engines.
