

Joao Carlo Muñoz Choque

Bachelor of Computer Science

✉ joao.munoz.c@gmail.com ☎ +56 9 93906662 📍 Santiago, Chile 🌐 joaomunoz.github.io/

Professional Summary

Computer Science professional with experience in IT monitoring, database administration, and critical infrastructure operations. Specialized in alert management, enterprise system support, and continuous process improvement. Results-oriented, with strong skills in collaborative work and incident resolution.

Education

- **Bachelor of Computer Science**, University of Santiago, Chile [2019]

Languages

- **Spanish**: Native
- **English**: Advanced

Technical Skills

- **Languages**: C/C++, Python, and PHP
- **Web & UI/UX**: HTML, CSS, and JavaScript
- **Framework**: Django
- **Databases**: Oracle, SQL Server, and MySQL
- **BI & ETL Processes**: Power BI, Pentaho, and SSIS
- **Monitoring**: Tivoli, Zabbix, Nagios, and VZOR
- **Incident Management**: Jira, ticketing, and re-
porting
- **OS**: Linux and Microsoft Windows
- **Version Control**: Git and GitHub
- **Methodologies**: SCRUM and XP
- **Office Tools**: $\text{\LaTeX}$, Microsoft 365 (Excel, Word, Power Automate, PowerPoint, Teams, and OneDrive), and OpenOffice

Work Experience

Kyndryl — IT Process and Monitoring Operator

Aug 2023 – Jul 2024

- Monitored and supervised networks, platforms, and services (Nagios, Tivoli, Zabbix), ensuring stability for international clients.
- Comprehensively managed alerts and incidents (Jira), provided user support, administered access controls, and resolved technical issues.
- Executed nightly/batch processes and managed backups using EMC NetWorker and TSM.
- Participated in platform maintenance, server restarts, and critical service monitoring.
- Produced technical reports and Power BI dashboards for visualization of operational KPIs.

G-Talent — Programmer Analyst

Sep – Nov 2019

- Developed custom reports using SQL Server (Stored Procedures) and ETL processes in SSIS.
- Used Oracle for internal audits and management report generation.
- Built a billing report for VTR television service customers, using SSIS with ETL processes and SQL Server queries to extract and transform data.

Medicien — Programmer Analyst

Jun – Aug 2019

- Designed and developed the database for the PortalPaciente project in SQL Server, which recorded medical appointments with their respective dates and times, with Pentaho ETL

automation that extracted dentist and appointment data from the dental service using APIs and security tokens.

- Managed data interoperability between Oracle Horizon and SQL Server engines.
